-!- FUNCTION: LOW AFFINITY RECEPTOR TO N-FORMYL-WETHIONYL PEPTIDES, WHICH ARE POWERRUL WEUTROPHILS CHEMOTACTIC FACTORS. BINDING OF FMLP TO THE RECEPTOR CAUGES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATES A PHOSPHATIOYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Alvarez V., Coto E., Sehen F., Gouzalek-Koces S., Lopez-Larrea C., "Molecular evolution of the N-formyl peptide and C5a receptors in

scale 0.498 Variance 93.300; Mean 46.426; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5773346
GENERAL INFORMATION.
GENERAL INFORMATION.
GENERAL INFORMATION.
APPLICANT: KING, PETER H.
APPLICANT: LEVINE, TODD
TITLE OF INVENTION: METHODS AND COMPOSITIONS USEFUL IN THE
TITLE OF INVENTION: RECOGNITION, BINDING AND EXPRESSION OF RIBONUCLEIC ACID
TITLE OF INVENTION: INVOLVED IN CELL GROWTH, NEOPLASIA AND IMMUNOREGULATION
NUMBER OF SEQUENCES: 101
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                        ä

Library went through one round of normalization. Tissue samples provided by Dr. Brian Dieckgraefe (Washington University, dieckéim wustl.edu); colonic mucosa represents a range of disease involvement from mild cryptitis to severe ulceration, fibrosis, and degeneration. Library constructed by Bento Soares and M. Fatima Bonaldo. "

with a modified polylinker; 1st strand cDNA was prepared
from normal prostate bulk tissue, and was then primed with
a Not I. - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI slates of the
modified pT713 vector. Library is normalized, and was
constructed by Bento Soares and M. Fatima Bonaldo. "

Jab_note="Options (amplications)"

Modified polylinker: Site_1: Not I: Site_2: Eco RI: 1st

strand cDNA was primed with a Not I: -oligo(dT) primer [5'

GUDIS-stranded cDNA was size selected, ligated to Eco RI

adapters (Pharmacia), digested with Not I and cloned into

the Not I and Eco RI sites of a modified pT7T3 vector

(Pharmacia). Library constructed by Bento Soares and

M.Fatlma Bonaldo. "
